

coatmaster

coatmaster Flex compatibility with fire alarm system

The coatmaster® Flex has been tested and is compatible with the flame detectors listed in the table below:

Manufacturer	Flame Detector Type
STS	FL 7-64, 8-64 and 9-64. Note: must be set to UV+IR mode!
Minimax	FMX 5000 UV. Conditionally compatible: YMX 5000 FMX EX 90° IR (for distances > 1m)
Total Walther	UV-03

Before operating the coatmaster® Flex in any environment, check if the measurement area is under surveillance of flame detectors. If the flame detector is not listed in the above table, use the coatmaster® Flex in that area after receiving written confirmation either from coatmaster AG or from the supplier of the flame detector only.

SpectralBlue®-IR recommended for older flame detector modules.
